

MOHAMED ASHFAQ

Linux Administrator | AWS Cloud Engineer | DevOps Engineer | Site Reliability Engineer
+91 8903707362 · ashfaqsd@gmail.com · Bengaluru, Karnataka, India · [linkedin.com/in/mohamedashfaq](https://www.linkedin.com/in/mohamedashfaq)

SUMMARY

Results-driven Cloud & DevOps Engineer with an MCA degree and 8 months of intensive hands-on training in Linux administration (RHEL/Ubuntu), Amazon Web Services (AWS), and the full DevOps toolchain. Proficient in designing and deploying scalable multi-tier AWS cloud architectures, containerizing applications with **Docker and Kubernetes**, and building automated CI/CD pipelines using **Jenkins and GitHub Actions**. Skilled in **Ansible** configuration management, Terraform, Prometheus, Grafana, Bash/Python scripting, infrastructure as code with CloudFormation, and 20+ AWS services including EC2, S3, IAM, VPC, Lambda, RDS, and CloudWatch. Eager to contribute as a Linux Administrator, AWS Cloud Engineer, or DevOps/SRE Engineer in a growth-focused team.

TECHNICAL SKILLS

Cloud (AWS): EC2, S3, IAM, VPC, RDS, CloudWatch, CloudFormation, Lambda, API Gateway, DynamoDB, Route 53, CloudFront, ELB, Auto Scaling, Elastic Beanstalk, SQS, AWS Systems Manager

DevOps & CI/CD: Git, GitHub, Jenkins, GitHub Actions, Docker, Kubernetes, Ansible, Maven, CI/CD Pipelines

Linux / OS: RHEL, Ubuntu - User & Group Management, File Permissions, SELinux, cron Jobs, Process Management, systemd, Package Management (yum/dnf/apt)

Containerization & Orchestration: Docker (Dockerfiles, Images, Compose, Networking), Kubernetes (Pods, Deployments, Services, ConfigMaps, Secrets, NetworkPolicies, Rolling Updates)

Scripting & Automation: Bash Shell Scripting, Python for AWS automation

Monitoring & Observability: AWS CloudWatch (Dashboards, Alarms, Billing Alerts), System Log Analysis, Performance Monitoring, Incident Troubleshooting, Prometheus, Grafana

Networking & Security: TCP/IP, DNS, HTTP/HTTPS, SSH, VPC Design, Subnetting, Security Groups, Firewalls, Load Balancing

EXPERIENCE

Linux, AWS & DevOps Internship Course

Apponix Technologies, Bengaluru | October 2025 – May 2026

8-month intensive program covering Red Hat Linux, AWS (28+ service modules), Docker, Kubernetes, Jenkins, Ansible, Maven, and Git.

- Administered Linux (RHEL/Ubuntu) servers: file system management, user/group administration, SELinux security, cron scheduling, systemd services, and Bash scripting - automating repetitive workflows and reducing manual effort.
- Deployed and managed **15+ AWS services** (EC2, S3, IAM, VPC, RDS, Lambda, CloudFormation, CloudFront, Route 53, DynamoDB) - building secure, scalable, multi-tier cloud architectures.
- Built end-to-end **CI/CD pipelines using Jenkins and GitHub Actions** to automate Docker image builds and container deployments, achieving fully automated delivery on every Git push.
- Containerized applications with Docker and orchestrated workloads on **Kubernetes** - managing Pods, Deployments, Services, ConfigMaps, Secrets, and NetworkPolicies.
- Automated provisioning of **5+ Linux hosts** using Ansible playbooks - ensuring consistent, repeatable environments and eliminating manual server configuration.
- Applied Git-based workflows (GitFlow branching, merging, rebasing, pull requests) and integrated GitHub Actions for automated testing pipelines.
- Monitored infrastructure via **AWS CloudWatch** dashboards and alarms; analyzed system logs for proactive troubleshooting and root-cause analysis.
- Practiced **DevSecOps** principles: IAM least privilege, VPC network isolation, security group hardening, and SELinux mandatory access controls.

PROJECTS

Linux-Based User & Permission Management System

Bash Shell Scripting • RHEL • cron • ACLs

- ♦ Automated creation, deletion, and privilege management of **50+ Linux user accounts and groups** using Bash scripts, reducing manual administration time by **~70%**.
- ♦ Enforced role-based access control (RBAC) across **10+ directories** using chmod, chown, and ACLs - achieving zero unauthorized access incidents in all test scenarios.

- ♦ Scheduled automated directory backups every **6 hours** via cron jobs; achieved **100% data recovery success** across all disaster recovery test runs.
- ♦ Implemented audit logging to track user logins and sudo escalations, improving system accountability and security compliance readiness.

AWS Multi-Tier Cloud Infrastructure Deployment

EC2 • S3 • IAM • VPC • RDS • CloudWatch • CloudFormation

- ♦ Designed a **3-tier AWS architecture** (web, application, data layers) with EC2 web servers, private RDS database subnet, and S3-backed static file storage - simulating a production-grade cloud environment.
- ♦ Created and enforced **15+ IAM policies** following least privilege - ensuring secure, auditable access control across all cloud resources and services.
- ♦ Configured VPC with public/private subnets, internet gateway, and route tables - achieving full network isolation with **zero unauthorized external access** to private subnets.
- ♦ Automated infrastructure provisioning with **CloudFormation templates**, reducing manual deployment time by **60%** and guaranteeing repeatable, drift-free environments.
- ♦ Set up CloudWatch alarms for CPU >80% and billing thresholds, enabling **proactive incident response and cost overrun prevention**.

Infrastructure Monitoring & Alerting System

Prometheus • Grafana • Linux • Docker

- ♦ Implemented centralized monitoring for 5+ Linux servers and 10+ Docker containers using Prometheus, providing **real-time visibility** into infrastructure health.
- ♦ Configured **15+ alerting rules** for CPU, memory, disk usage, and service uptime, enabling proactive incident detection and response.
- ♦ Created **4+ Grafana dashboards** to track system performance, resource utilization, and container health metrics across the environment.
- ♦ Reduced issue detection time by **75% through automated alerts** and observability practices, improving operational efficiency and reliability.

End-to-End CI/CD Pipeline with Jenkins, Docker & GitHub

Jenkins • Docker • Git • GitHub Actions • Maven • Docker Hub

- ♦ Built a fully automated Jenkins CI/CD pipeline: source code pulled from GitHub → built via Maven → Docker image created → containerized app deployed - cutting deployment time from **30 minutes to under 5 minutes (83% faster)**.
- ♦ Containerized a web application using Docker with optimized multi-stage Dockerfiles, eliminating environment inconsistencies and achieving **identical dev and production deployments**.
- ♦ Configured GitHub webhook triggers for automatic build initiation on every push event, processing **10+ automated builds per day** during development testing.
- ♦ Integrated Docker Hub for image versioning and artifact management, establishing a traceable pipeline from code commit to container deployment.

EDUCATION

Master of Computer Applications (MCA)

BSA Crescent Institute of Science and Technology, Chennai | Aug 2023 – Jun 2025

Bachelor of Computer Applications (BCA)

CMS College of Science and Commerce, Coimbatore | Aug 2020 – Jun 2023

TRAINING & CERTIFICATIONS

Red Hat System Administration - Apponix Technologies, Bengaluru (Oct 2025 – May 2026)

AWS Cloud Engineering Training - 28+ Service Modules (EC2, S3, IAM, VPC, Lambda, RDS, CloudFormation, DynamoDB, Route 53, CloudFront, & more) - Apponix Technologies

DevOps Toolchain Training: Docker, Kubernetes, Jenkins, Ansible, Maven, Git, GitHub Actions, CI/CD, Terraform, Prometheus, Grafana - Apponix Technologies
